

Most popular U.S. dog breed categories & others of concern, 1900-1950, 1970-1989, & since 2010

The percentage listed under each year or set of years is the percentage of the breed among total dogs listed for sale, i.e. entering the U.S. dog population from breeders. Dogs offered for adoption from animal shelters and rescues are not included in this figure because most will already have been counted as having entered the dog population from breeders before arriving at a shelter or rescue via impoundment or owner surrender. The "Avg." column is the average since 2010.

The estimated population of each breed or breed type (last column) is based on a total estimated U.S. dog population of 89.7 million.
